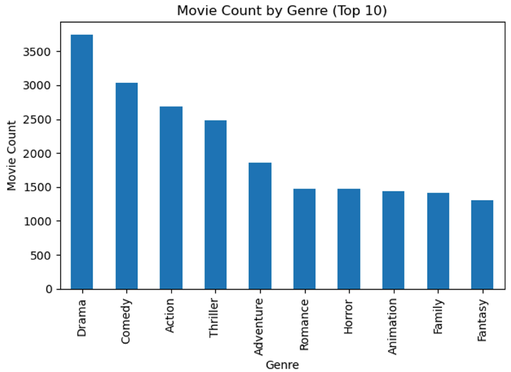
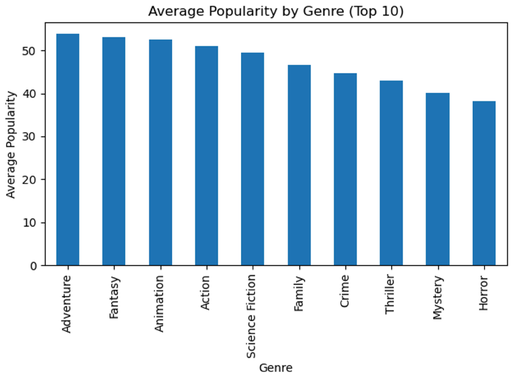
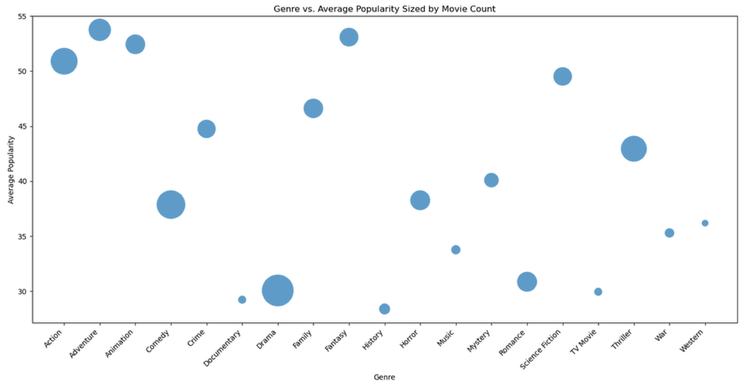
Netflix Movies & TV Shows Data Analysis



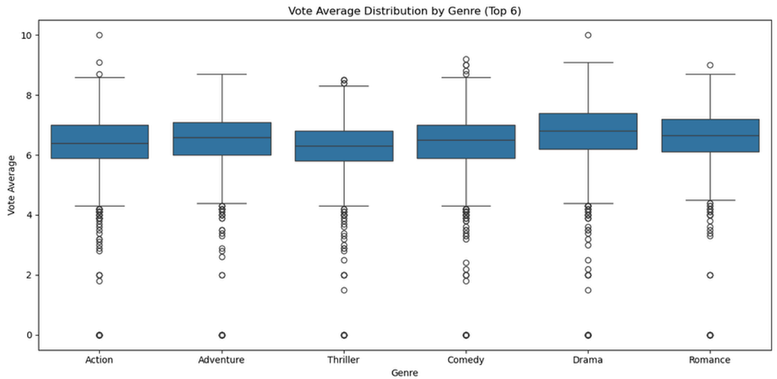
Drama is the highest-volume genre but ranks last in average vote count among top genres.



Adventure excels in both popularity and vote count, making it the most engaging genre overall.

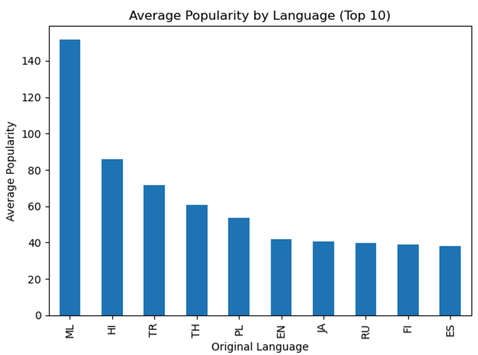


Science Fiction achieves top-tier engagement despite moderate catalog size.

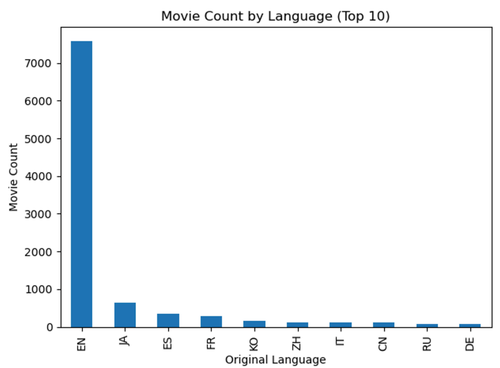


Genre and popularity are not strongly correlated: high genre volume does not guarantee high average popularity scores.

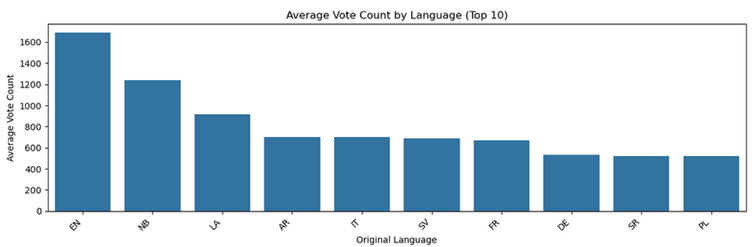
Tracking popularity trends by genre over time can help identify emerging genres before they peak, supporting proactive catalog investment.



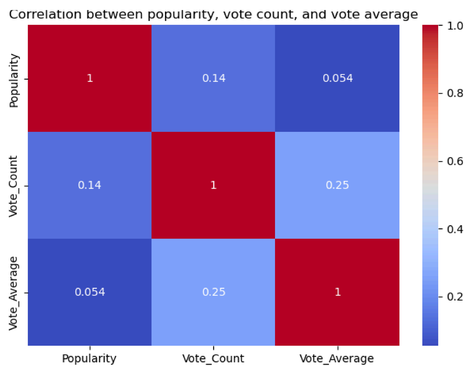
Malayalam (ML) content achieves the highest average popularity by a wide margin. On the other hand.



English dominates in total title volume (~7,500), but ranks only 6th in average popularity.



Non-English content, especially South Asian and Southeast Asian, generates outsized popularity relative to catalog size while English-language dominance in volume may suppress its own average popularity metric.



Popularity, vote count, and vote average are nearly independent, meaning that a trending title is not necessarily well-rated.
