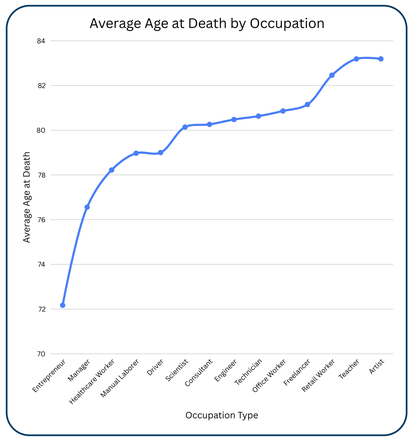
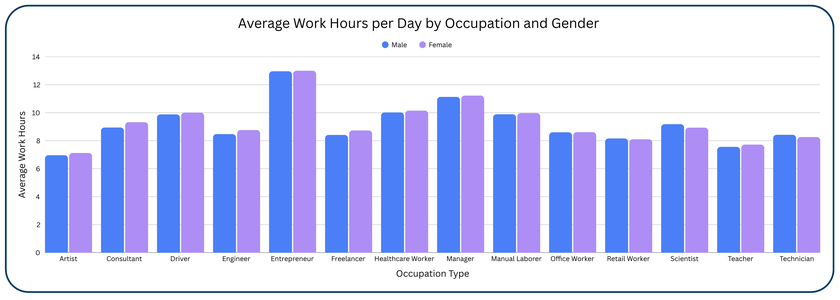
Work-Life Balance and Longevity

Longest-lived occupation
Artist
(~83 years avg.)

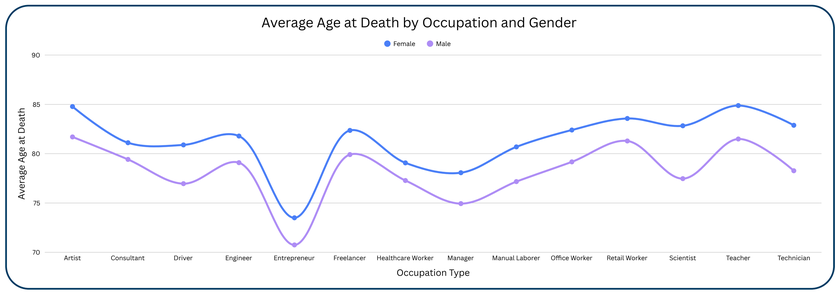
Shortest-lived occupation
Entrepreneur
(~72 years avg.)



Highest avg work hours
Entrepreneur
(~13 hrs/day)



Female avg. age at death
81.3 yrs
(+3.3 yrs vs. male)



Longevity by occupation

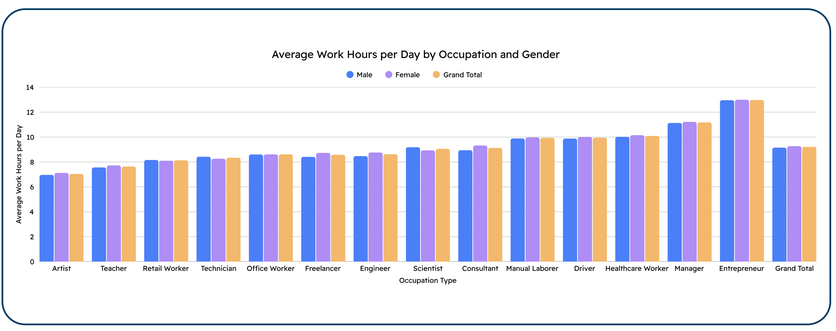
Teachers and artists live the longest (~83 years average age at death), while entrepreneurs live shortest (~72 years), which is ~11 years gap. The overall average ages in all occupations is 79.85 years.
There is a rough pattern where "calmer" or more autonomous professions (teaching, art, retail, freelancing) cluster at the top, while high-pressure roles (entrepreneur, manager, healthcare worker) cluster at the bottom.

Work Hours by Occupation

Entrepreneurs work the most (~13.0 hrs/day), followed by managers (~11.2 hrs/day) — far above the overall average of ~9.2 hrs/day. Artists work the least (~7.0 hrs/day). This pairs strikingly with chart 1: the two occupations with the longest hours (entrepreneur, manager) also have the two shortest lifespans, and vice versa for artists/teachers.

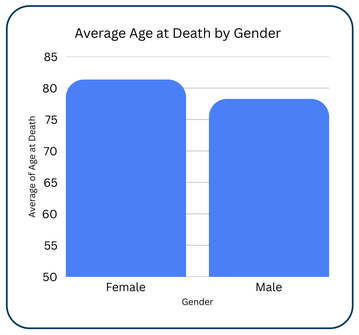
Lifespan by Occupation and Gender

Women outlive men in every single occupation. The gap is largest for managers (~3.1 years) and entrepreneurs (~2.8 years) and smallest for drivers (~3.9 years actually, driver has the largest gap among these). Teachers and artists again top the list for both genders.



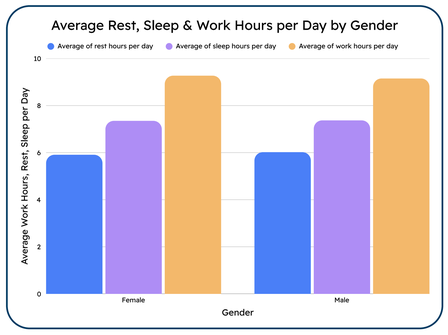
Work hours by occupation and gender

Work hours are fairly close between genders within each occupation (generally within ~0.2–0.5 hrs), with no consistent direction. Specifically, sometimes men work slightly more (entrepreneurs, scientists), sometimes women do (consultants, healthcare workers, drivers). Entrepreneurs again top the list for both genders by a wide margin.



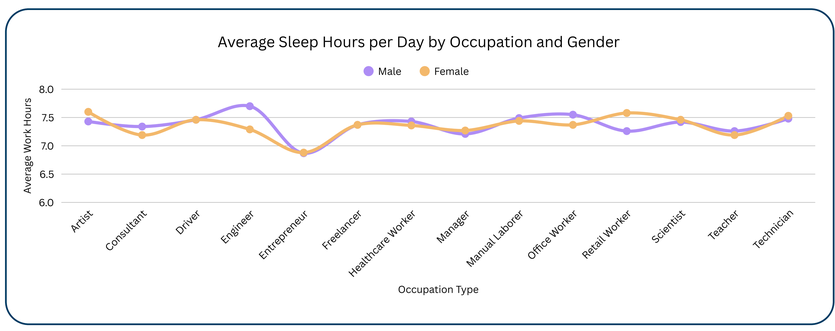
Overall Lifespan by Gender

Women live to 81.4 years on average vs. men at 78.3 year (a ~3.1-year gap), which is consistent with general population longevity trends.



Overall Work Hours by Gender

Women work slightly more on average (9.27 hrs/day) than men (9.15 hrs/day), though the difference is small (~0.13 hrs).



Sleep Hours by Occupation and Gender

Entrepreneurs get the least sleep (~6.87 hrs/day) of any occupation — notably below the overall average of ~7.36 hrs. Artists and technicians get the most sleep (~7.5 hrs). Combined with chart 2, entrepreneurs represent a "double whammy": most work hours and least sleep, which likely contributes to their shortest lifespans.

Overarching story

The data paints a clear picture that lifestyle factors, particularly work hours and sleep, correlate strongly with longevity. Entrepreneurs sit at one extreme (most work, least sleep, shortest life), while teachers and artists sit at the other (moderate work, more sleep, longest life). The individual-level dataset (10,000 records with exercise hours, rest hours, etc.) underlying these pivot tables could support deeper analysis, like correlating exercise habits with lifespan, if that's of interest.
